

## Digital student ID card

The digital student ID is printed on the EasyCard, which can be used as a school library card in addition to being used for student identification. The biggest feature of the digital student ID card is that the ID card itself is an EasyCard, which can be used for public transportation or small-amount consumption after the stored value, so that students can have a card in hand and travel unimpeded.

※ When new students register at the school, they will receive a digital student ID card for the first time, which will be sent by the school uniformly. Those who are damaged, lost, or renamed due to improper personal use or storage should re-apply and pay the cost.

※ If the student does not need to take public transportation, the digital student card can be used directly as a general student card and library card without storing value.

※ How to use digital student ID correctly

- 1) Do not place the digital student ID in a high temperature and high humidity environment to avoid damage.
- 2) Do not press or bend the card to avoid breaking the chip of the card.
- 3) Try not to put the card in the wallet or in the trouser pocket or backpack, so as not to accidentally press the card and cause damage to the card.
- 4) Avoid contact with magnetic objects: such as microwave ovens, magnets, etc. The above factors may cause the digital student ID to be used normally at the beginning, but after a period of time, it will not be able to be used normally.
